

# Light dependent relays 12 – 16 A

Garden and  
night lighting

Shop displays

Lighting for  
parks

Streetlights and  
car park lighting

**11**  
SERIES

### Relays for automatic control of lighting according to ambient light level - with separate light sensor

#### 11.31 - 1 NO 16 A output contact

- Sensitivity adjustment from 1 to 100 lux
- One module, 17.5 mm wide
- Low energy consumption
- 24 V DC/AC supply version available

#### 11.41 - 1 CO 16 A output contact

- European patent "zero hysteresis" for energy saving
- Italian patent "Light feedback compensation" principle
- Selector with 4 positions:
  - Standard range (threshold setting 1...80 lx)
  - High range (threshold setting 30...1000 lx)
  - continuous light (helpful during installation and initial testing and for maintenance purposes)
  - light off (useful for vacations)
- For the first 3 working cycles the delay time (On and Off) is reduced to zero in order to aid installation
- LED status indication
- SELV separation between contact and supply circuit
- Double insulation between supply and light sensor
- 35 mm rail (EN 60715) mount
- Cadmium free contact material
- Cadmium free light sensor (IC photo diode)

For outline drawing see page 10

#### Contact specification

Contact configuration		1 NO (SPST-NO)	1 CO (SPDT)
Rated current/Maximum peak current	A	16/30 (120 A - 5 ms)	16/30 (120 A - 5 ms)
Rated voltage/Maximum switching voltage	V AC	250/400	250/400
Rated load AC1	VA	4000	4000
Rated load AC15 (230 V AC)	VA	750	750
Nominal lamp rating:			
230 V incandescent/halogen W		2000	2000
fluorescent tubes with electronic ballast W		1000	1000
fluorescent tubes with electromagnetic ballast W		750	750
CFL W		400	400
230 V LED W		400	400
LV halogen or LED with electronic ballast W		400	400
LV halogen or LED with electromagnetic ballast W		800	800
Minimum switching load	mW (V/mA)	1000 (10/10)	1000 (10/10)
Standard contact material		AgSnO <sub>2</sub>	AgSnO <sub>2</sub>

#### Supply specification

Nominal voltage (U <sub>N</sub> )	V AC (50/60 Hz)	12...24	110...230	230
	DC	12...24	—	—
Rated power	VA (50 Hz)/W	2.5/0.9	5.2/2	
Operating range	V AC (50 Hz)	10.2...28.8	90...265	(0.8...1.1)U <sub>N</sub>
	DC	10.2...32	—	—

#### Technical data

Electrical life at rated load in AC1	cycles	100 · 10 <sup>3</sup>	100 · 10 <sup>3</sup>
Threshold setting:	Standard range lx	1...100	1...80
	High range lx	—	30...1000
Hysteresis (switching Off/On ratio)		1.25	1
Delay time: switching On/Off	s	15/30	15/30
Ambient temperature range	°C	-20...+50	-20...+50
Protection category:			
light dependent relay/light sensor		IP 20/IP 54	IP 20/IP 54

#### Approvals (according to type)

### 11.31

- 1 pole
- 17.5 mm wide

### 11.41

- 1 pole
- "zero hysteresis"
- 4 position selector

**Relays for automatic control of lighting according to ambient light level - with separate light sensor****11.42 - 1 CO + 1 NO 12 A output contacts**

- Two independent outputs with individual lux setting
- Selector with 4 positions:
  - Standard range (threshold setting 1...80 lx)
  - High range (threshold setting 20...1000 lx)
  - continuous light (helpful during installation and initial testing and for maintenance purposes)
  - light off (useful for vacations)
- For the first 6 working cycles (in total for channels 1 & 2) the delay time (On and Off) is reduced to zero in order to aid installation
- LED status indication

**11.91 - 1 CO 16 A output contact****(+ auxiliary output for Power Module)**

- Daily time switch function - programmable to inhibit main output (for energy saving)
- Auxiliary output - directly driven by the photosensor
- Italian patent "Light feedback compensation" principle
- Sensitivity adjustment from 1 to 150 lux
- LCD status indication, set-up and programming
- Internal battery for set-up/programming without supply and for time/program back-up in case of power failure (5 years)
- Low stand-by power consumption
- SELV separation between contact and supply circuit
- Double insulation between supply and light sensor
- 35 mm rail (EN 60715) mount
- Cadmium free contact material
- Cadmium free light sensor (IC photo diode)

For outline drawing see page 10

**Technical data**

Electrical life at rated load in AC1	cycles	100 · 10 <sup>3</sup>	100 · 10 <sup>3</sup>
Threshold setting:	Standard range lx	1...80	1...150
	High range lx	20...1000	—
Hysteresis (switching Off/On ratio)		1.25	Δ = 3 lx
Delay time: switching On / Off	s	15/30	25/50
Ambient temperature range	°C	-20...+50	-20...+50
Protection category: light dependent relay/light sensor		IP 20/IP 54	IP 20/IP 54

**Approvals** (according to type)**11.42**

- 2 independent outputs
- 2 individual lux settings
- 4 position selector

**11.91**

- Light dependent relay + time switch
- Auxiliary output (light dependent) with 19.91 power module available

\* 11.91 auxiliary output:  
12 V DC, 1 W max

## Wiring diagrams

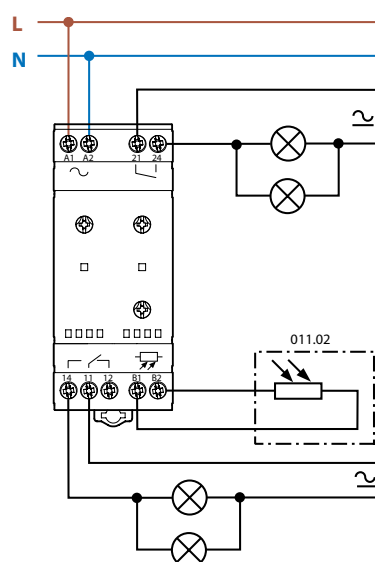

Type 11.31

Type 11.41

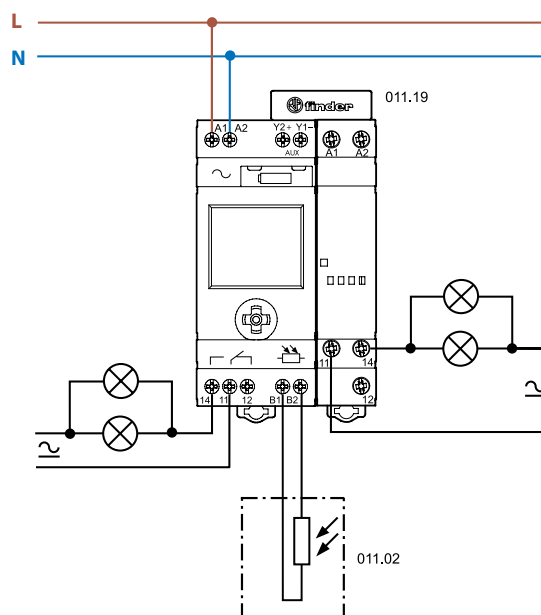

Type 11.42

Type 11.91

Type 11.91 + 19.91

## Advantage of the “zero hysteresis” patented circuit:

*ensures reliable switching without wasting energy*

TYPE 11.41 “ZERO HYSTERESIS”  
LIGHT DEPENDENT RELAYS

Switch OFF level = Switch ON level.  
Patented “zero hysteresis” circuitry  
ensures reliable switching without  
wasting energy.

TRADITIONAL  
LIGHT DEPENDENT RELAYS

“Traditional” light dependent relays  
incorporate switching hysteresis to  
prevent malfunctioning or tripping.  
This results in an unnecessary delay  
in switching off, and a resulting  
waste of energy (over period T).

— Brightness of the natural light  
— The NO of the light dependent relay is closed (light is switched on)

## Advantage of the “light feedback compensation” principle:

*avoids the effect of the lamps repeatedly “hunting” between On and Off, due to poor installation*

Light dependent relay where  
the lighting being controlled  
does not influence the light  
level seen by the light sensor

Correct functioning -  
provided the light sensor  
can be shielded from the  
effects of the controlled  
lighting switching  
On and Off

Traditional light dependent  
relay where the lighting  
being controlled influences  
the light level seen by the  
light sensor

Incorrect functioning where  
the lamps cycle between On  
and Off, because their effect  
is being detected by the  
light sensor

Type 11.41 and 11.91 light  
dependent relay with “light  
feedback compensation”

The innovative principle  
of “light feedback  
compensation” avoids the  
annoying and damaging  
effects of the lamps  
repeatedly “hunting”  
between On and Off, due to  
poor installation

— Ambient light level as measured by the light dependent relay's light sensor.  
— Ambient light + controlled light level as measured by the light dependent relay's light sensor.

### Notes

1. It is good practice to try to achieve a correct installation where the light emitted from the lamp(s) does not influence the light level seen by the light sensor, although the “light feedback compensation” principle will help when this is not fully achievable. In this case it should be appreciated that the “light feedback compensation” principle may delay slightly the time of Switch Off - beyond the ideal.
2. The compensation principle is not effective where the combined effect of the ambient light and the controlled lighting exceeds a maximum value (200 lux for the 11.91, 160/2000 lux for standard/high range of the 11.41).
3. The 11.41 and 11.91 types are compatible with gas discharge lamps that attain full output within 10 minutes, since the electronic circuit monitors lamps' light output over a 10 minute period to achieve a true assessment of its contribution to the overall lighting level.

## Functions 11.91

	Switch-OFF time	Switch-ON time		Application examples
	NO	NO		Working as a standard light-dependent relay
	YES	NO		Working where lighting is not required from 10 PM onwards
	YES	YES		Working where lighting is not required between 1 AM and 5 AM
AUX Y1 Y2				Additional output - light dependent without time switch intervention

All the functions and the values can be set through the front joystick and are displayed on the front LCD.

**Display mode**

During normal operation, with AC supply connected, the following is displayed:

- the current time
- the current lux level (upper bars)
- the set lux threshold (lower bars)
- the status (open/closed) of the 11-14 output contact
- the "moon" symbol (only if the current lux level is lower than the set threshold). It also indicates that the Auxiliary output is On, although the main output contact 11-14 may be On, depending on the chrono program.
- the "chrono" symbol (only if a switch-off time is enabled).

From **Display mode** it is possible to enter **Program mode** or **Set-up mode** with a short or long (> 2 s) press respectively, to the joystick centre. From **Display mode** it is also possible to enter **Hand mode**, where (independently of the lux level and the Chrono program) the 11-14 output contact is forced into the On or Off position with a long (> 2 s) press of the joystick upper or lower quadrants, respectively. The "hand" symbol is then displayed. A long press to the opposite quadrant will reset the hand mode.

**Program mode**

In this mode it is possible to set the lux threshold level, to enable and to set the switch-off time, to enable and to set the switch-on time. With a short press to the joystick right or left quadrant it is possible to progress from one program step to another (accepting the values set). At any program step it is possible to modify the set values with a short press to the joystick upper or lower quadrant. A long (> 1 s) press allows the fast increment (or decrement) of values. A short press to the joystick centre will resume the display mode.

**Set-up mode**

In this mode it is possible to set the current year, month, day, hour and minute (in this order) and to enable european "Daylight saving".

With a short press to the joystick right or left quadrant it is possible to progress from one set-up step to another (accepting the values set); in any step it is possible to modify the set values with a short press to the joystick upper or lower quadrant. A long (> 1 s) press allows the fast increment (or decrement) of values.

A short press to the joystick centre will resume the display mode.

Note: the product is supplied with central european time factory set and "Daylight saving" enabled.

**Power-off mode**

If the 230 V AC supply is not connected, the relay enters power-off mode and to ensure the long life of the built-in back-up battery only the clock is maintained active. The display turns off and no other operation (including light measurement) is performed.

With a press to the joystick during power-off mode it is possible to "awaken" the device and to enter program or set-up mode (the "electrical plug" symbol is displayed); after about 1 minute inactivity the power-off mode is resumed.

Note: with the supply not connected, the program or set-up modes absorb a higher current than the power-off mode, thus influencing the battery life.

#### Auxiliary output

A solid state output at terminals Y1-Y2 is provided (rated 12 V DC, 80 mA/1 W max.): this can be used with the power module **19.91.9.012.4000** connected by the dedicated **011.19** connector. Or, it is possible to connect a suitable relay (for example, 38-48-49-4C-58-59 interface module) provided the coil is within the rating, and the wiring does not exceed 40 cm length. The auxiliary output is driven exclusively by the light sensor of the device, and is consequently independent of the time switch. With the main contact, this permits a flexible lighting system controlled by the ambient light, both with and without the influence of the time switch function.

#### 19.91 power module specification

Contact configuration		1 CO (SPDT)
Rated current/Maximum peak current ( $I_N/I_{max}$ )	A	16/30 (120 A – 5 ms)
Rated voltage/Maximum switching voltage ( $U_N/U_{max}$ )	V AC	250/400
Rated load AC15 (230 V AC)	VA	750
Nominal lamp rating:		
	230 V incandescent/halogen W	2000
	fluorescent tubes with electronic ballast W	1000
	fluorescent tubes with electromagnetic ballast W	750
	CFL W	400
	230 V LED W	400
	LV halogen or LED with electronic ballast W	400
	LV halogen or LED with electromagnetic ballast W	800
Nominal supply voltage ( $U_N$ )	V DC	12
Ambient temperature range	°C	-20...+50
Protection category		IP 20

### Type 11.31/41/42

LED	Supply voltage	NO output contact	
		11.41/11.42	11.31

## Accessories

011.02

### Light sensor (supplied with light dependent relay) IP 54

011.02

- Ambient temperature range: -40...+70 °C
- Cadmium free
- Non polarized
- Double insulated with respect to light dependent relay supply
- Not compatible with old 11.01 and 11.71 light dependent relay

011.03

### Flush-mounted light sensor\*

011.03

- Protection category: IP 66/67
- Ambient temperature range: -40...+70 °C
- Cadmium free
- Non polarized
- Double insulated with respect to light dependent relay supply
- Not compatible with old 11.01 and 11.71 light dependent relay

\* Purchased separately or included with products with **POA** packaging code (11.31.0.024.0000 POA - 11.31.8.230.0000 POA - 11.41.8.230.0000 POA)

### Connection cable

Material	PVC, flame retardant
Conductor size	mm <sup>2</sup> 0.5
Cable length	mm 500
Cable diameter	mm 5.0
Working voltage	V 300/500
Test voltage, cable	kV 2.5
Max. temperature	°C +90

\* ring adaptor  
for Ø 18 mm  
(Ø 15 mm without adaptor)

011.01

### Adaptor for panel mounting (supplied with light dependent relay), 35 mm wide

011.01

011.19

### 2-pole connector (for type 11.91 and 19.91 power module)

011.19

For direct connection of 11.91 auxiliary output (Y1-Y2) to 19.91 supply (A1-A2)

060.48

### Sheet of marker tags, for types 11.31, 11.41, 11.42, 19.91, plastic, 48 tags, 6 x 12 mm, for CEMBRE thermal transfer printers

060.48

019.01

### Identification tag, for types 11.41 and 11.42, plastic, 1 tag, 17 x 25.5 mm

019.01
